

Step 1. Set Up the Swivl

The Swivl includes a kit containing MOST of the Swivl supplies you will need.

There are five key supplies you will need:

1. The Swivl device itself.

2. The Swivl remote, which is attached to a necklace piece (Note: the kit includes three remotes. Use the remote that does not have a red or blue sticker on it).

3. The iPhone/iPad Swivl connector.

4. The included tripod.

5. iPhone device you are using, be sure to install the Swivl app, and sign in using your department's username and password. If your department does not have an account, you can create a free one to use for your recordings today.

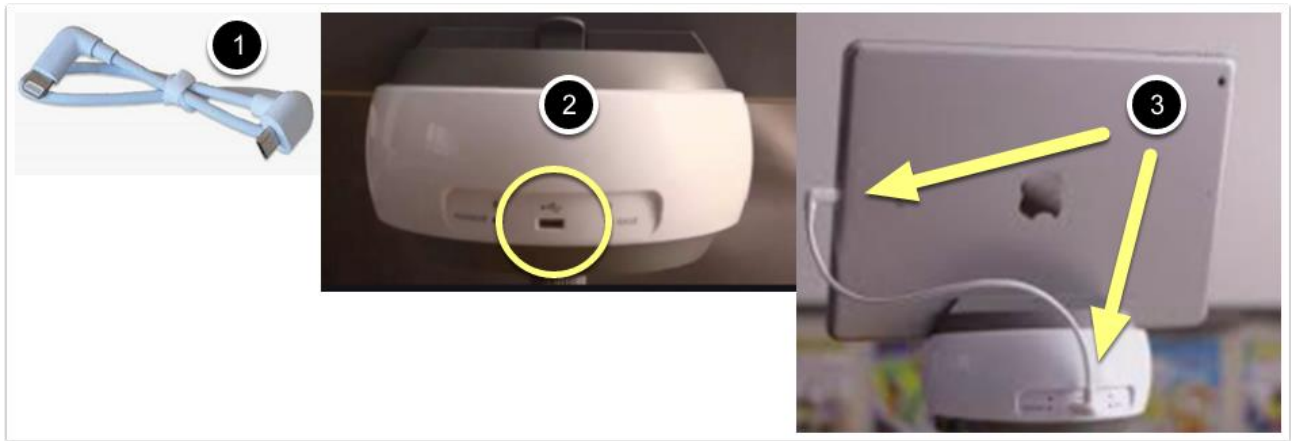

6. Attach the Swivl hub to the tripod by inserting the tripod screw into the opening at the base of the device. Twist the Swivl onto the tripod until it's secure.

7. Place your iPhone or iPad into the slot on top of the Swivl.

8. Using the connector cord [1], plug your iPad or iPhone into the Swivl [2+3].

9. Place the remote necklace piece around your neck. See next set of instructions for how to power on and use the tools.
