

Step 4: Pair the Device

Prior to recording, you may notice that the device is not tracking your movement. One possible solution to this would be to re-pair the Swivl to your bluetooth device.

1. Press the "+" button on the Swivl. You will need to push and hold until the indicator light turns red.

2. While facing and standing in close proximity to the Swivl, aim the head of the bluetooth device at the Swivl. Press and hold the center circle on the bluetooth device.

3. When the bluetooth device has paired, you will see a notification on your iPad/iPhone indicating the pairing was successful.
4. Once paired, the Swivl will begin to follow your movement.
